Ms. Margaret Littlejohn is VSP Western Coordinator, National Park Service, based at the Cooperative Park Studies Unit, University of Idaho. I thank Dwight Madison, VSP Eastern Coordinator, National Park Service and the staff at Canyonlands National Park for their assistance with this study. The VSP acknowledges the Public Opinion Lab of the Social and Economic Sciences Research Center, Washington State University for its technical assistance.
Visitors arrived commonly in families (53%); often in groups of two (59%). Thirty-six percent of visitors were 26-40 years old and 29% were over 55 years of age. Most (65%) were on their first Canyonlands visit.

Foreign visitors comprised 11% of the total visitation and commonly came from Germany, Canada, and Switzerland. Americans came from Colorado (29%), California (15%), Utah (11%) and other states.

Of the visitors spending less than one day in the park, 43% of the visitors spent four to six hours. Of the visitors who spent one day or more, 61% visited for two to three days. Most visitors viewed scenery (99%) and hiked less than four hours (65%).

Most visitors were aware of commercial tours in the park prior to their visit (71%). Nine percent of the visitors took commercial tours. They most often relied on travel/tour books (41%) to find out about the tours.

Of those visitors reporting expenditures on the day(s) they visited Canyonlands, the average visitor group spent $114.00 in the Moab/Monticello area; the average per capita expenditure was $46.00. Most visitors spent up to $100.00 (65%). Visitors spent the greater proportion of their money for food (32%), rather than lodging, travel or other expenses.

The most important features to visitors during their Canyonlands' visit were scenic views, clean air, wilderness, and solitude. Commercial tours were the least important. Several educational topics--geology, archeology, and history were considered to be of about equal importance to visitors; biology was rated as somewhat less important.

According to visitors, the most useful interpretive services were the park map/brochure, highway directional signs, visitor centers, and self-guided trail brochures. The least useful were evening campfire programs and ranger-led walks or tours.

For more information about the Visitor Services Project, please contact Dr. Gary E. Machlis, Sociology Project Leader, University of Idaho Cooperative Park Studies Unit, College of Forestry, Wildlife and Range Sciences, Moscow, Idaho 83843 or call (208) 885-7129.

INTRODUCTION

This report describes the results of a study of visitors at Canyonlands National Park (referred to as "Canyonlands"). This visitor study was conducted May 10-16, 1990 by the National Park Service (NPS) Visitor Services Project (VSP), part of the Cooperative Park Studies Unit at the University of Idaho.

A Methods section discusses the procedures and limitations of the study. The Results section follows, including a summary of visitor comments. Next, a Menu for Further Analysis helps managers request additional analyses. The final section has a copy of the Questionnaire. A separate Appendix includes a comment summary and the visitors' unedited comments.

Many of this report's graphs resemble the example below. The large numbers refer to explanations following the graph.

1: The figure title is a general description of the graph's information.
2: A note above gives the 'N', or number of cases in the sample, and a specific description of the information in the chart. Use CAUTION when interpreting any data where the sample size is less than 30 as the results may be unreliable.
3: Vertical information describes categories.
4: Horizontal information shows the item number in each category; proportions may be shown.
5: In most graphs, percentages are included to provide additional explanation.
METHODS

General strategy

Interviews were conducted and questionnaires distributed to a sample of visitors entering Canyonlands during May 10-16, 1990. Visitors completed the questionnaire during or after their trip and then returned it by mail.

Questionnaire design

The questionnaire design used the standard format of previous Visitor Services Project studies. See the end of this report for a copy of the questionnaire.

Sampling

Visitors were sampled using a selected interval as they entered Canyonlands at the Visitor Centers/Entrance Stations at Island in the Sky and at Needles.

Questionnaire administration

Visitor groups were greeted, briefly introduced to the purpose of the study and asked to participate. If visitors agreed, an interview took approximately two minutes. These interviews included determining group size and the age of the adult who would complete the questionnaire. This individual was asked his or her name, address and telephone number for the later mailing of a reminder-thank you postcard.

Data analysis

Two weeks following the survey, a postcard reminder-thank you was mailed to all participants. A replacement questionnaire was mailed to each participant who had not returned the questionnaire by four weeks after the survey. Questionnaires returned within ten weeks were coded and entered into a computer. Frequency distributions and cross-tabulations were calculated using a standard statistical software package. Respondents' comments were summarized.

Sample size, missing data and reporting errors

This study collected information on both visitor groups and individual group members. Thus, the sample size ("N"), varies from figure to figure. For example, while Figure 1 shows information for 398 groups, Figure 3 presents data for 1016 individuals. A note above each figure's graph specifies the information illustrated.
Occasionally, a respondent may not have answered all of the questions, or may have answered some incorrectly. Unanswered questions create missing data and cause the number in the sample to vary from figure to figure. For example, although 399 questionnaires were returned, Figure 1 shows data for only 398 respondents.

Questions answered incorrectly due to carelessness, misunderstanding directions and so forth, turn up in the data as reporting errors. These create small data inconsistencies.

Limitations

Like all surveys, this study has limitations which should be considered when interpreting the results.

1. It is not possible to know whether visitor responses reflect actual behavior. This disadvantage applies to all such studies and is reduced by having visitors fill out the questionnaire as they visit the park.

2. The data reflect visitor use patterns during the study period of May 10-16, 1990. The results do not necessarily apply to visitors using the park during other times of the year.

3. Caution is advised when interpreting any data with a sample size of less than 30, as the results may be unreliable. Whenever the sample size is less than 30, the word "CAUTION" is included in the graph, figure or table.

Special Conditions

The Island in the Sky road (Highway 313) was under construction during the week of the study. Some visitors were delayed for up to one hour; others chose not to wait and did not visit. The Needles road (Highway 211) was being chipsealed on May 10, 11 and 14, causing only minor delays (less than 15 minutes).
RESULTS

A. Visitors contacted

Four hundred ninety-three visitor groups were contacted; 92% accepted questionnaires. Three hundred ninety-nine visitor groups completed and returned their questionnaires, an 88% response rate.

Table 1 compares information collected from the total sample of visitors contacted and the actual respondents who returned questionnaires. Non-response bias is insignificant.

B. Characteristics

Figure 1 shows group sizes, which varied from one person to 50 people. Fifty-nine percent of Canyonlands visitors came in groups of two people, 12% came in groups of four. Fifty-four percent of visitors came in family groups, as shown in Figure 2.

Figure 3 shows a wide range of age groups; the most common were visitors aged 31-35 (14%), followed by three groups: ages 61-65 (11%), ages 36-40 (11%), and ages 26-30 (11%). Sixty-five percent of visitors were at Canyonlands for the first time (Figure 4).

Foreign visitors comprised 11% of all visitation. Map 1 and Table 2 show that most foreign visitors came from Germany (45%), Canada (15%), and Switzerland (10%). Map 2 and Table 3 show that most American visitors came from Colorado (29%), California (15%), and Utah (11%), as well as other western states.

</table>
C. Length of stay

Forty-three percent of the visitors spent less than one day at Canyonlands. As Figure 5 shows, 43% stayed four to six hours, while 21% spent nine hours or more. Fifty-seven percent of the visitors spent one day or more, with 34% spending two days and 27% spending three days, as in Figure 6. Twelve percent spent six days or more.

![Figure 5: Number of hours visitors spent at Canyonlands](image)

![Figure 6: Number of days visitors spent at Canyonlands](image)
D. Activities

Figure 7 shows the proportion of visitor groups who participated in each activity during their visit. Common activities were viewing scenery (99%), hiking for less than four hours (65%), picnicking (42%) and visiting archeological sites (41%). Among the other activities described, visitors listed taking photographs, camping at Needles Outpost, driving down Potash road, relaxing, and climbing.

![Activity Proportion Chart]

Figure 7: Proportion of visitor groups participating in each activity

N=399 visitor groups; percentages do not equal 100 because visitors could report more than one activity.
E. Sites visited

Map 3 shows the proportion of visitor groups that visited selected sites at Canyonlands. Most visitor groups stopped at Moab (77%), Arches National Park (64%), Island in the Sky (60%), and the Needles (57%). Map 4 shows that visitors’ first stop was Moab (41%), Needles (17%), Monticello (16%), and Arches National Park (13%).

N=399 visitor groups;
percentages do not equal 100 because
visitors could visit more than one site.

Map 3: Proportion of visitors who visited each site
N=399 visitor groups; percentages do not equal 100 due to rounding.

Map 4: Proportion of visitors who visited each site first
F. Commercial tours

Most visitors (71%) were aware before visiting Canyonlands that commercial tours are offered in the park, as Figure 8 shows.

Nine percent of the visitors took commercial tours during their visits to Canyonlands. Of those visitors taking tours, most found out about the tours through travel guides/tour books (41%), followed by signs and billboards (30%) as shown in Figure 9. Other sources included a mailed brochure and motel recommendations.

Figure 8: Awareness of commercial tours, prior to visit

Figure 9: Tour information source for visitors taking tours
G. Importance of park features

Visitors were asked to rate the importance of the following features to their visit: commercial tours, recreational activities, interpretive programs/educational opportunities, scenic views, wilderness, clean air, and solitude. A five point scale was provided: 1=extremely important, 2=very important, 3=important, 4=somewhat important, and 5=not important.

As shown in Figures 10-16, most visitors rated scenic views as "extremely important" or "very important" (94%); other features visitors considered "extremely important" or "very important" were clean air (90%), wilderness (82%), solitude (79%), and recreational activities (63%). Commercial tours received the largest proportion of "somewhat important" or "not important" ratings (84%).

Figure 12: Importance of interpretive programs/educational opportunities
Figure 13: Importance of scenic views

Figure 14: Importance of wilderness
Figure 15: Importance of clean air

Figure 16: Importance of solitude
H. Importance of educational topics

Visitors were asked which educational topics were most important to their visits: geology, archeology, history, biology, and other. They were asked to rate these topics using the following scale: 1=extremely important, 2=very important, 3=important, 4=somewhat important, and 5=not important.

More than half of the visitors identified all of the educational topics as "extremely important" or "very important:" geology (72%), archeology (66%), history (61%) and biology (54%), as Figures 17-21 show. A smaller group of visitors also identified other subjects, including ecology, botany, desert ecology, environmental concerns, that they felt were "extremely important" or "very important."

Very important 21%

Moderately important 9%

Somewhat important 2%

Not important 9%
I. Usefulness of interpretive or visitor services

Visitors rated the usefulness of various interpretive or visitor services. They used a five point scale: 1=extremely useful, 2=very useful, 3=useful, 4=somewhat useful, and 5=not useful.

The interpretive or visitor services with the highest proportion of "extremely useful" or "very useful" ratings included the park map/brochure (91%), highway directional signs (82%), visitor centers (81%), and trail brochures (70%), as in Figures 22-31. Those services which received the highest proportion of "somewhat useful" or "not useful" ratings included evening campfire programs (58%) and ranger-led walk or tour (51%).

CAUTION: Figures 22-31 show how useful visitors rated various interpretive or visitor services, whether or not they used them.

Figure 27: Usefulness of ranger-led walk or tour

Figure 28: Usefulness of evening campfire programs
Figure 29: Usefulness of roadside exhibits

N=340 visitor groups; percentages do not equal 100 due to rounding.

Figure 30: Usefulness of bulletin boards
Ninety-three percent of the visitor groups had members who did not reside in the Moab/Monticello area. These visitor groups were asked to report lodging expenditures. All visitors were asked to report their expenditures for food, travel and other expenses.

For all visitor groups reporting at least some expenditures, the average visitor group expenditure for the day was $114.00; the average per capita amount spent was $46.00.

Thirty-four percent of Canyonlands' visitors spent $51-100.00 for lodging, food, travel and other expenses in the Moab/Monticello area on the day they visited Canyonlands (see Figure 32). As Figure 33 shows, the largest proportion of money was spent for food (32%), while money was spent almost equally among the other three categories--lodging, travel and other items.

Of the visitors who reported lodging expenditures, 33% spent no money for lodging on the night before their Canyonlands visit; 29% spent $26-50.00; and 22% spent $25.00 or less (see Figure 34). The average lodging expenditure was $31.00.

Figures 35-37 show that visitor groups commonly spent $25.00 or less for travel (69%), food (47%), and other items (including recreation, tours, film, gifts, etc.) (48%) in the Moab/Monticello area on the day they visited Canyonlands.

K. Planning for future

Visitors were asked "If you were planning for the future of Canyonlands National Park, what would you propose? Please be specific."

N=762 comments; visitors could make more than one comment.

Facilities more than adequate 3
Add picnic areas 3
Need more shade trees at visitor use sites 3
Restrict water outlets to limit overuse 3
Need pay phones 3
Need more rest stops with restrooms 3
Need flush toilets 3
Provide more RV dump stations 2
Other comments 4

Campgrounds
Add more campsites 59
Add full service campsites 9
Do not add campsites 7
Separate tent sites from RV sites 7
Improve campgrounds 7
Add more tent sites 6
Add more backcountry campsites 5
Full service campsites not necessary 4
No overnight RV parking 3
Make all campsites primitive 2
Improve information on campground entrance signs 2
Keep current number of backcountry campsites 2
Maintain & clean campsites better 2
Other comment 1

Trails
More hiking trails; various lengths 20
Do not pave trails 6
Build mountain bike trails of varying lengths 4
Sign/mark trails better 4
Need trailhead signs to have more info-map 3
Monitor mountain bike impacts closely 2
Keep natural trail markers (cairns) 2
Other comment 1

Roads
Need more road access 19
Prohibit more roads 15
Satisfied with current level of road access 11
Need more directional signs 9
Reduce 4-wheel drive access 7
Do not pave any more roads 7
Improve roads 7
Pave more roads 6
Need additional viewpoints 5
Increase elderly/handicapped access 4
Maintain visitor safety & ease of access on steep roads 3
Continue to have backcountry roads for motorized use 2
Remove pavement on all roads 2
Improve only main access routes 2
4-wheel road signs inadequate 2
Need more road mileage signs 2
Add roads 2
Other comments

Miscellaneous
- Encourage nonmotorized access
- Provide access to natural water sources
- Forewarn about traffic delays
- Need RV/trail parking areas
- Other comment

POLICIES & REGULATIONS

- Require backcountry visitors to be "educated" users
- Restrict/limit access
- Limit commercialization
- Change camping policies
- Prohibit more activities
- Prohibit motorized access
- Need reservations-only campground section
- Limit motorized use
- Maintain same 4-wheel access
- Prohibit 4-wheel access
- Prohibit motorcycles
- Prohibit lodging in park
- Limit/reduce number of aerial overflights
- Reduce backcountry capacity
- Change fee policy
- Restrict visitation to current level
- Segregate user areas
- Restrict mountain bike access
- Increase camping fee
- Restrict backcountry users to designated campsites
- Other comments

WILDERNESS/RESOURCE MANAGEMENT

- Maintain wilderness qualities
- No more improvements needed
- No more development--area too fragile
- Emphasize preservation
- Maintain park for mountain bikers/hikers only
- Monitor human impact to avoid harmful change
- Prohibit mineral extraction or industrial use near park
- Protect air quality
- Other comments
BUSINESSES & CONCESSIONS

Commercial Businesses
- Provide lodging near park 11
- Offer campgrounds near park 4
- Need vehicle support service for bicyclists 2
- Need more/better quality restaurants 2
- Need more/cheaper lodging 2
- Other comments 2

Concessions
- Need lodging inside park 9
- Prohibit park concessioners 6
- Need food and supply store 4
- Visitor centers need food & drink facilities 4
- Prohibit more concession development 4
- Permit gas & auto repair concession 2
- Need restaurants inside park 2
- Other comments 2

MISCELLANEOUS
- Adjacent BLM & state lands should be transferred to NPS control 7
- Comments about BLM land 2
- Other comments 3
L. Comment summary - Introduction

The separate Appendix of this report contains unedited visitors' comments. A summary of their comments appears below, and in the Appendix. Some comments offer specific suggestions on how to improve their visits; others describe what they enjoyed or did not enjoy.

Enjoyed Squaw Flat campground 2
Keep campgrounds without water to remind of water’s importance 2
Create different campgrounds for different needs (RV, tent, etc.) 2
Other comments 5

POLICIES
Enforce current regulations 4
Shorten camping length of stay so more can use 2
Need camping reservation system 2
Limit backcountry use by commercial groups 2
Change commercial outfitter permit policy 2
Restrict motorized vehicles to existing roads 2
Change backcountry campsite policies 2
Change campground policies 2
Ban military overflights/aerial sightseeing 2
Other comments 6

RESOURCE MANAGEMENT
Enjoyed primitive/uncrowded conditions/solitude 24
Preserve it 19
Don’t commercialize/develop 10
Don’t overcrowd it 3
Enjoyed clean air 3
Need cleaner air like in past 3
Park overcrowded 3

MENU FOR FURTHER ANALYSIS

Park personnel who wish to see other tables, graphs, and maps to learn more about their visitors may request such information from the VSP. Two kinds of analyses are available:

1) Two-way comparisons compare two characteristics. For example, to learn about the activities of a particular age group, request a comparison of activity by age group; to learn how total expenditures varied among group types, request a comparison of total expenses by group type.

2) Three-way comparisons compare a two-way comparison to a third characteristic. For example, to learn about the site activities of visitor group types, request a comparison of (activity by site visited) by group type; to learn about age group participation in a site activity, request a comparison of (age group by activity) by site visited.

Consult the complete list of characteristics from Canyonlands visitors; then write those desired in the appropriate blanks on the order form. Two order forms follow the example below.

SAMPLE

Analysis Order Form
Visitor Services Project
Report 26 (Canyonlands)

Date of request: / / 
Person requesting analysis: 
Phone number (commercial): 

The following list specifies all of the variables available for comparison from the visitor survey conducted in your park. Consult this list for naming the characteristics of interest when requesting additional two-way and three-way comparisons.

- Group size
- Group type
- Age
- State residence
- Country residence
- Length of stay
- Number of visits
- Mosby/Monacello resident

Two-way comparisons (please write in the appropriate variables from the above list)

- Total expenses by group type
- Activity by 

Three-way comparisons (please write in the appropriate variables from the above list)

- Age group by activity

QUESTIONNAIRE
Publications of the Visitor Services Project

A number of publications have been prepared as part of the Visitor Services Project. Reports 1-4 are available at cost from the University of Idaho Cooperative Park Studies Unit upon request. All other reports are available from the respective parks in which the studies were conducted.

For more information about the Visitor Services Project, please contact Dr. Gary E. Machlis, University of Idaho Cooperative Park Studies Unit, College of Forestry, Wildlife and Range Sciences, Moscow, Idaho 83843 or call (208) 885-7129.
